Principles of Web Development

Mini Assignment 5
Due: March 18, 2017

Using the XAMPP MySQL database server create the tables and queries from the lecture #9 LAB slide. We began doing this lab in class, but for this Mini Assignment you will complete it. Do the following:

- Create the database
- Create the tables
- Populate the tables with random but meaningful data
- Write the queries

WHAT TO HAND IN

- (1) Export your database using the MySQL export command
- (2) Create a MINI5.TXT file with the solution queries

I will need to be able to open your database on my end and then copy and paste your queries to see if they work. I may write my own queries to test deeper.

GRADING

- +1 : Following instructions
- +8 : Table structures
- +2 : Exported database
- +9 : Queries
