Principles of Web Development

Mini Assignment 6
Due: March 25, 2017

Using the XAMPP Apache, MySQL database server and PHP create the tables and queries from the lecture #9 LAB slide. We began doing this lab in class, but for this Mini Assignment you will complete it. If you did Mini Assignment #5 then you have already created the database tables.

Do the following:
- Create the database in XAMPP
- Create the tables in XAMPP
- Populate the tables with random but meaningful data in XAMPP
- Write the queries in PHP
- Display the data in a simple but nice way that makes it look like an invoice

WHAT TO HAND IN

(1) Export your database using the MySQL export command
(2) Submit an index.php file that executes your queries

    I will need to be able to open your database on my end and then run your index.php file from my XAMPP/Apache server running on localhost. I may write my own queries to test deeper.

GRADING

- +1 :   Following instructions
- +3 :   Table structures
- +1 :   Exported database
- +10 :   Queries in index.php
- +5:   Made output look like an invoice
